

# 2025 energy storage policy changes

Why was the energy storage roadmap updated in 2022?

The Energy Storage Roadmap was reviewed and updated in 2022 to refine the envisioned future states and provide more comprehensive assessments and descriptions of the progress needed (i.e., gaps) to achieve the desired 2025 vision.

How many states have energy storage policies?

Around 15 states have adopted some form of energy storage policy, including procurement targets, regulatory adaptation, demonstration programs, financial incentives, and/or consumer protections. Several states have also required that utility resource plans include energy storage.

How did energy storage grow in 2022 & 2023?

The US utility-scale storage sector saw tremendous growth over 2022 and 2023. The volume of energy storage installations in the United States in 2022 totaled 11,976 megawatt hours (MWh)—a figure surpassed in the first three quarters of 2023 when installations hit 13,518 MWh by cumulative volume.

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

How can energy storage be used in future states?

Target future states collaboratively developed as visions for the beneficial use of energy storage. Click on an individual state to explore identified gaps to achievement. Energy storage is essential to a clean and modern electricity grid and is positioned to enable the ambitious goals for renewable energy and power system resilience.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Increased energy demand and the continued role of fossil fuels in the energy system mean emissions could continue rising through 2025-35. Emissions have not yet peaked, and global CO<sub>2</sub> emissions from combustion and industrial processes are projected to increase until around 2025 under all our bottom-up scenarios. The scenarios begin to diverge toward ...

The Philippines' first large-scale solar-plus-storage hybrid (pictured), was commissioned in early 2022.

## 2025 energy storage policy changes

Image: ACEN. The Philippines Department of Energy (DOE) has outlined new draft market rules and policies for energy storage, a month after the country allowed 100% foreign ownership of renewable energy assets.

be the latest triennial update to the Energy Code. The proposed 2025 amendments, if adopted, would be incorporated into the 2025 edition of the Energy Code and become effective on January 1, 2026. The proposed 2025 amendments to the Energy Code are hereafter referred to as the "Proposed 2025 Amendments," "2025 Energy Code," or "Energy

"The Inflation Reduction Act's new technology-neutral Clean Electricity credits, which will come into effect in 2025, are one of the law's most significant contributions to tackling the climate crisis," said John Podesta, Senior Advisor to the President for International Climate Policy. "Today's initial guidance from Treasury will ...

The policy shift toward a net-zero United Kingdom continues to emerge, given strong momentum by the recent 26th United Nations Climate Change conference in Glasgow. With a bold target of a 78 percent reduction in economy-wide greenhouse-gas emissions by 2035, now enshrined in law, and the UK government putting the Green Industrial Revolution at the ...

Energy storage resources are becoming an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. There are currently 23 states, plus the District of Columbia and Puerto Rico, that have 100% clean energy goals in place. Storage can play a significant role in achieving these goals ...

New York is defining energy storage policy within the broader efforts contained in the Reforming the Energy Vision (REV) initiative, which has been in place since 2015 and aims to ... are geared toward enabling the unique system benefits storage can provide; and 2) changes in ... deploying 1,500 MW of energy storage systems by 2025.
