Are AGM batteries good for off-grid solar systems?

AGM batteries are handy for small, off-grid solar systems. For example, a remote cabin with low energy demand and a small system on the roof may be the perfect candidate for an AGM battery bank. No maintenance is needed, and the relatively low upfront cost of lead-acid batteries makes AGM batteries ideal for these smaller, off-grid setups.

Where is Bluesun solar based?

Bluesun Solar Group has established overseas warehouses in Rotterdam, Koper, Long Beach. Direct delivery of solar panels from local to customers greatly reduces the transportation cost of goods from home to abroad. There is no need to worry about the customs declaration and clearance of the goods in the warehouse.

Are deep-cycle AGM batteries a good choice for solar panels?

In recent years, deep-cycle AGM batteries have become available on the market. Like other deep-cycle lead-acid battery options, deep-cycle AGM products can be a solid choice to pair with a solar panel system in select cases.

Are AGM batteries recombinant?

When storing energy, these batteries recombine the oxygen and hydrogen in their cells, which is why AGM batteries are also a member of the "recombinant" battery family. The biggest difference between AGM batteries and standard lead-acid batteries is the level of maintenance they require.

Are AGM batteries safe?

AGM batteries are completely sealed, and you'll never have to check water levels or deal with expelled gas like you would in a traditional flooded lead-acid battery product. This makes AGM batteries generally a safer lead-acid option, as you can set them and never touch them again (until you need a replacement).

Are AGM batteries better than gel batteries?

Due to the fiberglass absorption, AGM batteries tend to hold slightly more electrolyte than gel, making them more tolerant to high current draws. The reinforced mats also make the AGM casing more puncture-resistant. Gel batteries on the other hand have added silica to strengthen the bonds between electrolyte molecules.
