

All In One LFP Energy Storage System

OneReal New Energy

Where are the Aries grid LFP cells made?

The Michigan factory, which is located in Van Buren Township, will begin production of the Aries Grid LFP cells in 2024, and the cells will be offered in 2-, 3- and 6-MWh options to support modular and scalable renewable energy storage.

Which LFP is safe?

Aries(TM) LFP, Aries(TM) II and Gemini(TM) all use safe, sustainable LFP. Gemini's dual-chemistry also relies on ONE's anode-free chemistry. Lithium iron phosphate (LFP) is created from lower-cost, abundant iron. It is remarkably safe but less energy dense. That's where ONE's innovative system design thinking comes in. System Design

Why is LFP a good choice for a battery pack?

System Design There is only so much space in a battery. Contemporary packs devote much of that space to fire mitigation. Because LFP is so safe, we can allot more space for energy, packing in more cells to match or even exceed the range of nickel-cobalt-based storage systems.
