

This paper proposes a hierarchical sizing method and a power distribution strategy of a hybrid energy storage system for plug-in hybrid electric vehicles (PHEVs), aiming to reduce both the energy consumption and battery degradation cost. As the optimal size matching is significant to multi-energy systems like PHEV with both battery and supercapacitor (SC), ...

Excellent mechanical properties are of paramount importance in broadening the application scope of hydrogels. Hydrogel-based supercapacitors or batteries serve as self-powered energy sources for wearable devices. ... Hierarchical three dimensional polyaniline/N-doped graphene nanocomposite hydrogel for energy storage applications. ...

Intermittent power output can be optimized through the application of energy storage systems that store energy at times of low demand, and discharge energy at times of high demand. ... and automotive industries as a means to smooth the mechanical output of a motor, their application for energy storage, particularly for handling utility scale ...

The rapid consumption of fossil fuel and increased environmental damage caused by it have given a strong impetus to the growth and development of fuel-efficient vehicles. Hybrid electric vehicles (HEVs) have evolved from their inchoate state and are proving to be a promising solution to the serious existential problem posed to the planet earth. Not only do ...

The applications of energy storage systems, e.g., electric energy storage, thermal energy storage, PHS, and CAES, are essential for developing integrated energy systems, which cover a broader scope than power systems. Meanwhile, they also play a fundamental role in supporting the development of smart energy systems.

Topics considered within the scope of this section include: batteries and supercapacitors; carbon capture, storage, and utilization; environmental impacts of energy nanotechnologies; flexible, self-powered, and/or integrated energy devices/systems; fuel cells; hydrogen production and storage; optoelectronic devices for efficient energy usage
