How do I design a PV system?

Find the right design software for your project. Once you have that, position the modules on the roof design. The BlueSol design tool simulates the behavior of the PV system in all its components, provides a module layout overview, and is downloadable via an activation code that you receive.

How much weight can a PV module impose?

This is compared to other methods of PV installation which could impose as low as 9 kg/m². It is important to consider the selection of PV modules as these can also not only vary in size but obviously in imposed loads as well.

Can a PV system be included in a project?

The client's budget and the project's financial plan can allow for the inclusion of a PV system though the capital budget may determine scheme size rather than an optimal return on investment or roof size. Ensure both safe access and fire considerations are accounted for.

When planning a PV array for an existing building?

When planning a PV array for an existing building the condition of the flat roof should always be considered before the mounting method and array location can be determined. These are some key points to consider and clarify before proceeding with the project. Additional dead and imposed weight loadings.
