

British energy storage battery testing equipment

What are battery energy storage systems?

This data is used for system optimization, maintenance planning, and regulatory compliance. Battery Energy Storage Systems play a pivotal role across various business sectors in the UK, from commercial to utility-scale applications, each addressing specific energy needs and challenges.

Are lithium-ion batteries a viable energy storage solution?

This guidance is also primarily targeted at variants of lithium-ion batteries, which are currently the most economically viable energy storage solution for large-scale systems in the market. However, the nature of the guidance is such that elements will be applicable to other battery technologies or grid scale storage systems.

Why should you use our purpose-built battery testing facilities?

Using our purpose-built battery testing facilities, we can initiate and monitor the failure of cell and battery packs and examine the consequences and impact of abusing batteries to failure conditions. Features of our testing facilities:

Is energy storage device testing the same as battery testing?

Energy storage device testing is not the same as battery testing. There are, in fact, several devices that are able to convert chemical energy into electrical energy and store that energy, making it available when required.

What are the safety requirements for electrical energy storage systems?

Electrical energy storage (EES) systems - Part 5-3. Safety requirements for electrochemical based EES systems considering initially non-anticipated modifications, partial replacement, changing application, relocation and loading reused battery.

How do I choose the best cell and battery test equipment?

When you specify and purchase cell and battery test equipment for your R&D lab or production line, it is critical to have a thorough understanding of performance specifications. While it may be easy to state the price, the number of channels you need, and the current per channel, the accuracy of the equipment is the most critical specification.
