

Capwall Graphene Solid State Battery

GTEM-48V15K-W

What is a capwall energy storage system?

Capwall is designed for residential energy storage system. Compatible with most of famous brand inverters in the world, it is convenient for installation and maintenance. Based on supercapacitor technology, making the battery projected cycle life up to 20 years. Benefiting from solid-state battery, it uses solid and polymer electrolyte.

What is the difference between capmega & capwall energy storage system?

Capmega is the solution of containerized energy storage system, and the complete system includes BESS (usually Enerbond uses solid-state battery), PCS, switch cabinet, cooling system, fire protection system, EMS etc., with the features of high safety, ultra-long life, and high reliability. Capwall is designed for residential energy storage system.

What are the different types of graphene battery technology?

Modbus (RS485, RTU), Canbus, and TCP communication are available. As golf courses and recreational facilities seeking eco-friendly solutions that enhance efficiency and performance, the integration of Graphene Battery technology is poised to redefine the golfing experience.
