

The world's energy infrastructure faces increased pressure to decarbonize as global temperatures continue to rise. As leaders from around the world meet this week at the 2023 United Nations Climate Change Conference in Dubai--commonly referred to as COP28--there is opportunity for representatives to discuss and negotiate global efforts to address climate change.

In this paper, sodium sulfate decahydrate (SSD) with a phase transition temperature of 32 °C was selected as the phase change energy storage material. However, SSD has the problems of large degree of supercooling, obvious phase stratification, and low thermal conductivity. To address these issues, a new SSD composite phase change energy storage ...

Thermal storage can be categorized into sensible heat storage and latent heat storage, also known as phase change energy storage [16] sensible heat storage (Fig. 1 a1), heat is absorbed by changing the temperature of a substance [17]. When heat is absorbed, the molecules gain kinetic and potential energy, leading to increased thermal motion and ...

The optimization indexes of the phase change energy storage systems in each climate zone under the full-load operation strategy are shown in Fig. 9. As can be seen from the figure, the energy savings of the phase change energy storage CCHP systems in all five cities are obtained under the full-load operation strategy.

Phase change materials (PCMs) have attracted tremendous attention in the field of thermal energy storage owing to the large energy storage density when going through the isothermal phase transition process, and the functional PCMs have been deeply explored for the applications of solar/electro-thermal energy storage, waste heat storage and utilization, ...

Phase change energy storage concrete energy piles demonstrate higher heat transfer efficiency than conventional ones. Concrete strength decreased by replacing coarse aggregates with phase change aggregates. Gum Arabic (GA) can enhance the strength of concrete and is more economical and environmentally friendly than mineral admixtures. This ...

The development of phase change energy storage technology promotes the rational utilization of renewable energy, and the core of this technology is phase change material (PCM). Hydrated salt as PCM is successfully applied in various fields, especially its application in green building attracts the most attention. A suitable phase change ...
