What is chemical energy storage?

This section reviews chemical energy storage as it relates to hydrogen, methanol, and ammonia as the energy storage medium. Methanol and ammonia constitute a sub-set of hydrogen energy storage in that hydrogen remains the basic energy carrier where the different molecular forms offer certain advantages and challenges, as discussed below.

Are there cost comparison sources for energy storage technologies?

There exist a number of cost comparison sources for energy storage technologies. For example, work performed for Pacific Northwest National Laboratory provides cost and performance characteristics for several different battery energy storage (BES) technologies (Mongird et al. 2019).

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

How does chemical energy storage work?

Chemical energy storage can add power into the grid and also store excess power from the grid for later use. Depending on how it is stored, it can be kept over long periods and is not seasonally dependent like pumped hydro. Many chemicals used for energy storage, like hydrogen, can decarbonize industry and transportation.

What is the largest energy storage technology in the world?

Pumped hydro makes up 152 GW or 96% of worldwide energy storage capacity operating today. Of the remaining 4% of capacity, the largest technology shares are molten salt (33%) and lithium-ion batteries (25%). Flywheels and Compressed Air Energy Storage also make up a large part of the market.

How much gas can be stored in a compressed tank?

Compressed Tank Gas Storage: Generally requires high-pressure tanks operating in the range of 5,000 to 10,000 psi (350 to 700 bar). These storage tanks are generally suited for small-scale and mobile storage systems, storing five to ten kilograms of hydrogen each.
