

Deep Cycle D C VRLA AGM Series NorthBatt

What is a deep cycle battery?

Discover's VRLA AGM Deep Cycle batteries deliver deep-cycle and cyclic discharging for a general range of stationary applications such as backup power, solar, and renewable energy storage. The batteries are maintenance-free, safe, and easy to use to reduce energy costs and grid dependence. How do I work with Discover?

What is a deep cycle battery?

C&D Technologies' Deep Cycle Series (DCS) batteries are designed to perform regardless of how harsh the operating conditions may be. DCS batteries are designed and manufactured for maximum life in applications which are a combination of float and cycle service or for frequent cycling applications.

What are advanced tubular gel deep cycle batteries?

Advanced tubular gel deep cycle batteries are a proven technology with 15+ year design life. There are many well established trusted companies manufacturing high quality tubular gel lead-acid batteries for solar applications.

What are the different types of deep cycle batteries?

The oldest and most basic type is the flooded lead-acid battery where the electrolyte (acid) is in liquid form. Until 10-12 years ago flooded batteries were the most common deep cycle battery available and are still used for some large off-grid systems.

How long do AGM batteries last?

AGM batteries use the VRLA system but store the electrolyte in an absorptive glass mat between lead calcium plates. This is the most cost effective type of VRLA battery and has become very popular over recent years. However cycle life (lifespan) of this type of battery can be quite low compared to flooded and gel batteries, usually 6-10 years.

Can a deep cycle battery be left in a fully charged state?

Thus a deep cycle battery can be left in a fully charged state for several months but should never be left in a fully discharged state as this can cause rapid sulphation and permanently damage the battery. A deep cycle battery bank is the combination of a number of batteries linked together in either series or parallel.

NORTHBATT Mpataria f/v systematop tyoy: AGM, Deep Cycle Tasi: 12V | CHoritikotita C100/C10: 240/200Ah o Diatirisi kai anaktisi fortioy: Exairetiki diatirisi fortisis kai ...

Absorbent Glass Mat (AGM) technology for efficient gas recombination of up to 99% and freedom from electrolyte maintenance; Low profile terminals with threaded copper alloy inserts for reduced height, reduced

Deep Cycle D C VRLA AGM Series NorthBatt

maintenance and ...

The Fullriver DC Series AGM batteries are the best Deep Cycle VRLA batteries we've found! Fullriver's construction and plate chemistry are designed to provide long life in demanding applications. Fullriver use more lead creating stronger ...
