Our research shows considerable near-term potential for stationary energy storage. One reason for this is that costs are falling and could be \$200 per kilowatt-hour in 2020, half today's price, and \$160 per kilowatt-hour or less in 2025. ... The most important implication is this: the large-scale deployment of energy storage could overturn ...

Energy storage deployments in emerging markets worldwide are expected to grow over 40 percent annually in the coming decade, adding approximately 80 GW of new storage capacity to the estimated 2 GW existing today. This report will provide an overview of energy storage developments in emerging

TES systems are divided into two categories: low temperature energy storage (LTES) system and high temperature energy storage (HTES) system, based on the operating temperature of the energy storage material in relation to the ambient temperature [17, 23]. LTES is made up of two components: aquiferous low-temperature TES (ALTES) and cryogenic ...

These identified innovations show incredible promise to achieve the Long Duration Energy Shot cost goals. By summarizing the Storage Innovations' specific and quantifiable research, development, and deployment (RD& D) pathways to achieve the Storage Shot goals, this report is a useful tool to analyze the most impactful combinations of ...
