What makes a good fan?

A good fan should make you feel more comfortable while also being energy-efficient, gentle on the ears, and easy to control. For almost a decade, we've tested dozens of fans, and we consistently land on the Vornado 630 Medium Air Circulator as our first recommendation. This compact fan can send breezes to the far corners of a large room.

How much power does a fan use?

A powerful motor can be switched between four modes and five fan speeds that offers a wide coverage. With an advanced Sleep Mode and a maximum fan speed of 25 feet per second, you don't need to choose between a quiet or cool nights sleep. A 39W energy usage shouldn't demand too much power either.

Which fan should I Choose?

So, while you'll likely be happy with whichever fan you choose, we've picked out the best tower, pedestal and floor fans to suit your space. The Honeywell tower fan has a small footprint, sleek design, sturdy base and eight speed settings, plus it's quiet and affordable.

Should I buy a large fan or a small fan?

Depending on where you decide to put your new fan, the size is worth considering. If you're looking to ventilate a small office or room, a large fan might be overkill. In contrast, a larger space or gym will likely require more than a simple clip fan.

Which Tower fan should I buy?

The most similar designs among our current recommendations are the pedestal-mounted Dreo PolyFan 704S and the compact Vornado Strata, the latter of which throws a tower-sized breeze (though it still suffers from some cleaning struggles). Prior to those models, we tested some tower fans that were, well, fine.

Is a powerful fan a good idea?

Powerful Fans Are Often Ugly. But This One Is Beautiful. A good fan can help keep you cool when it's sweltering outside, but they're often an eyesore. This handsome fan works great--and it's nice to look at, too.

Is a Mist Fan Worth It for the Price? Misting fans come in a range of prices, from affordable models under \$100 to high-end units over \$500.
