

European energy storage field analysis

What does the European Commission say about energy storage?

The Commission adopted in March 2023 a list of recommendations to ensure greater deployment of energy storage, accompanied by a staff working document, providing an outlook of the EU's current regulatory, market, and financing framework for storage and identifies barriers, opportunities and best practices for its development and deployment.

How much energy storage will Europe have in 2022?

Many European energy-storage markets are growing strongly, with 2.8 GW (3.3 GWh) of utility-scale energy storage newly deployed in 2022, giving an estimated total of more than 9 GWh. Looking forward, the International Energy Agency (IEA) expects global installed storage capacity to expand by 56% in the next 5 years to reach over 270 GW by 2026.

Should the EU develop a new energy storage strategy?

The European Parliament has called on the Commission to develop a new comprehensive EU energy storage strategy which could create new market incentives and help accelerate recovery.

What is energy storage research?

This research is part of our Energy Storage Research Service which provides insight into key markets, competitors and issues shaping the sector. The European Association for Storage of Energy (EASE), established in 2011, is the leading member-supported association representing organisations active across the entire energy storage value chain.

Why is energy storage important in the EU?

It can also facilitate the electrification of different economic sectors, notably buildings and transport. The main energy storage method in the EU is by far 'pumped hydro' storage, but battery storage projects are rising. A variety of new technologies to store energy are also rapidly developing and becoming increasingly market-competitive.

How big will energy storage be in the EU in 2026?

Looking forward, the International Energy Agency (IEA) expects global installed storage capacity to expand by 56% in the next 5 years to reach over 270 GW by 2026. Different studies have analysed the likely future paths for the deployment of energy storage in the EU.

The United States' publication volume in the field of EST is slightly lower than Europe's. Except for the significant increase in electrochemical energy storage publications from 2008 to 2015, the publication volumes of all types of energy storage technologies in the United States have not shown a significant increase, and even chemical energy ...

The majority of this cost was down to a single pinch point in the UK's electricity grid on the Scottish/English border called the B6 boundary. Analysis by energy storage developer and operator Field estimates this boundary alone could cause up to £2.2 billion of curtailment costs by 2030 as the UK's curtailment problem escalates.

Energy 2020 - COM(2010) 639 The European Strategic Energy Technology Plan's (SET-Plan) as expressed in COM(2009) 519 The Energy Roadmap 2050 - COM(2011) 885 Renewable Energy: a major player in the European energy market - COM(2012) 271 Section 3 presents and discusses the views of all stakeholder groups as expressed during a

From the 19 - 21 October the spotlight was on energy storage markets, policies and technologies. The attention towards energy storage is on the rise as more and more actors now recognise the key role it plays in achieving the decarbonisation targets. With 350 participants, 130 speakers and 11 exhibitors, this edition of the Energy Storage Global Conference provided valuable insights ...

In Europe, there is a growing consensus amongst policymakers that energy storage is crucial to securing affordable and low carbon energy. In May 2022, European Union launched their REPowerEU plan, a part of the European Green Deal, which mandates that 45% of Europe's energy generation needs to come from renewable sources by 2030.

The 8th edition of the European Market Monitor on Energy Storage (EMMES) with updated views and forecasts towards 2030. Each year the analysis is based on LCP Delta's Storetrack database, which tracks the deployment of FoM energy storage projects across Europe. EMMES focuses ...

Ember is an energy think tank that aims to accelerate the clean energy transition with data and policy. Ember is the trading name of Sandbag Climate Campaign CIC, a Community Interest Company registered in England & Wales #06714443. "Ember" and "Sandbag" are trademarks held at the United Kingdom and European Union Intellectual Property Offices.
