

FT Series AGM Batteries Recreen Energy

What are AGM batteries?

AGM batteries are a type of lead-acid battery that have traditionally been used in cars. Recently, technological advances have made them usable for solar-plus-storage setups as well. AGM stands for absorbed glass mat, one of the main physical differences between AGM batteries and traditional flooded lead-acid batteries used in cars.

Are AGM batteries recombinant?

When storing energy, these batteries recombine the oxygen and hydrogen in their cells, which is why AGM batteries are also a member of the "recombinant" battery family. The biggest difference between AGM batteries and standard lead-acid batteries is the level of maintenance they require.

Are AGM batteries good for off-grid solar systems?

AGM batteries are handy for small, off-grid solar systems. For example, a remote cabin with low energy demand and a small system on the roof may be the perfect candidate for an AGM battery bank. No maintenance is needed, and the relatively low upfront cost of lead-acid batteries makes AGM batteries ideal for these smaller, off-grid setups.

How do AGM batteries release energy?

Chemically speaking, AGM batteries release energy by breaking apart oxygen and hydrogen molecules. When storing energy, these batteries recombine the oxygen and hydrogen in their cells, which is why AGM batteries are also a member of the "recombinant" battery family.

Are AGM batteries safe?

AGM batteries are completely sealed, and you'll never have to check water levels or deal with expelled gas like you would in a traditional flooded lead-acid battery product. This makes AGM batteries generally a safer lead-acid option, as you can set them and never touch them again (until you need a replacement).

Are deep-cycle AGM batteries a good choice for solar panels?

In recent years, deep-cycle AGM batteries have become available on the market. Like other deep-cycle lead-acid battery options, deep-cycle AGM products can be a solid choice to pair with a solar panel system in select cases.

FT Series is a front terminal 12V VRLA AGM battery which are designed for durability in telecommunications and electric utility applications. It provides high performance and reliability in medium and long-duration discharge applications.
