Which machine types are certified by SAP HANA?

For SAP HANA,SAP certifies only a subset of the machine types available from Google Cloud. The machine types that SAP certifies for SAP HANA include both Compute Engine virtual machines (VMs) and Bare Metal Solution bare-metal machines. Custom configurations of the general-purpose n1- and n2-highmem VM typesare also certified by SAP.

What is a SAP HANA single-host architecture on Google Cloud?

On Google Cloud,an SAP HANA single-host architectureincludes one Compute Engine instance for the SAP HANA databasewith a network bandwidth of up to 32 Gbps,or up to 100 Gbps on selected machine types using high-bandwidth networking.

Does SAP HANA support scale-up and scale-out architectures?

SAP HANA on Google Cloud supports both scale-up and scale-out architectures\. In the following diagram,notice the deployment on Google Cloud and the disk layout: [Diagram of SAP HANA on Google Cloud with scale-up and scale-out architectures]. You can use Cloud Storage to back up your local backups available in /hanabackup.

How big should a /Hana backup volume be?

For the /hana/datavolume,we recommend a size of either 1.5 times the size of your memory or 4 TB,whichever is greater. The recommended size for the /hanabackupvolume is determined by your backup strategy. You can also use the Cloud Storage Backint agent for SAP HANA to backup the database directly into Cloud Storage. The minimum size for the /hanabackup volume is determined by your backup strategy.

Which service level is required for /Hana/data & /Hana/log volumes?

For the /hana/data and /hana/log volumes,the Extreme service level of NetApp CVS-Performance is required. You can use the Premium service level for the /hana/shared directory if it is in a separate volume from the /hana/data and /hana/log directories.
