

Do flat roofs need a minimal inclination?

Highlight: For flat roofs, building codes require a minimal inclination, which, however, does not suffice for proper water drainage. Why are we still implementing it in every day practice? The greatest danger of non-functioning flat roofs is in the fact that they are - flat.

Should a flat roof be inclined?

From their flat surfaces, water cannot drain properly and may seriously harm the building. Therefore, flat roofs are always constructed with a slight inclination. According to the rules of good construction, the minimum inclination depends on the maximum flatness allowed by the final surface layer properties.

What is Flat Roof Pros?

Flat Roof Pros is a company that specializes in flat or commercial roofs. We provide the best available service in the market for any person or business, regardless of the size or type of roof. Our team of experts guarantees your timeline and budget without compromising on the quality.
