What are lithium stocks?

Lithium stocks are commodity stocks that have principal interests in the mining, refining and distribution of lithium. The companies included under the umbrella of lithium stocks may be involved in the production of other metals and minerals, but lithium will be included in their portfolio.

Should you invest in lithium mining companies?

Some lithium mining companies could be bargains at the moment, but investors will need to choose strong companies that will be able to weather the downtrend in lithium prices. From hedging inflation to diversifying a portfolio, there are plenty of reasons to invest in commodities and the companies that produce them.

Are lithium stocks a risky investment?

Finance, as of May 30, 2024. Lithium stocks, like all commodity stocks, are closely linked to the supply and demand trends in the underlying materials they produce. All investing generally carries risk, and miners like this have specific risks based on their business model. That said, we've tried to highlight leaders in the sector based on:

Are lithium mining companies a bargain?

That means some lithium mining companies could be bargains at the moment, but investors will need to choose strong companies that will be able to weather the downtrend in lithium prices. Globally, lithium producers generally need an average of \$20,000 per metric ton to be profitable.

Should you invest in the lithium space right now?

To invest in the lithium space right now, investors will need patience and conviction that the market will eventually turn around. "If (EV) demand growth continues to stall, which I believe it will, I can't see the current lithium surplus ending any time soon," Berman says.

Investing in Lithium Mining Stocks as Demand Grows. ... Energy density is measured in watt-hours as a function of liters. The energy density of the basic lead-acid battery in your car is 30 Wh/L. ... Due to their compact size and huge power storage, lithium-ion batteries are perfect for EVs. Plug-in EVs like the Tesla Model 3 are affordable ...

Lithium battery technology is essential to the rise of electric vehicles (EVs), renewable energy storage, and

Lithium mining and energy storage stocks

mobile devices. Due to rising demand and inelastic supply, tight lithium markets are expected to persist through the end of the decade. 1, 2

A third of global cobalt is used for EV batteries, and more than two-thirds of the world's cobalt comes from the Democratic Republic of Congo. A 2021 study by Bamana et al. reported that 15-20% of Congolese cobalt is sourced from 110,000 to 150,000 artisanal, small-scale miners. The study documents how waste from the small mines and industrial cobalt ...
