

What are the advantages of M10 solar cell busbar p-type bifacial half-cut?

M10 solar cell, compared with the existing product span, equipment, process, auxiliary material maturity, production line upgrading difficulty, current product yield, and other factors, the M10 cell busbar P-type bifacial half-cut is the best size to achieve ultra-high power modules, more mature industrial ecology, fewer transportation problems.

What is the difference between a mono PERC and a solar cell?

Compared with the full cell modules, the temperature of the mono perC cell module is 2-3 degrees lower, and the hot spot temperature is 10-20 degrees lower. Solar cell M10 module has a lower shadow shielding loss. Sunrise M10 cell is mainly used for Aquaman series solar modules.

Which solar cell has a lower shadow shielding loss?

Solar cell M10 module has a lower shadow shielding loss. Sunrise M10 cell is mainly used for Aquaman series solar modules. It supports single-sided, double-sided, and all-black customization requirements. The size of M10 cell can be provided according to the installation scene, such as 108 cells, 132 cells, 144 cells etc.
