

Can Ni MH - battery - datasheet - v1.3 be changed?

Ni-MH - Battery - Datasheet - v1.3 Specifications can change without notice. New data will be updated on our website: The present equipment is protected by several international patents, trademarks and copyrights.

Can a Ni MH battery be recyclable?

The resulting battery technology would enable independent scalability of energy and power of the Ni-MH battery chemistry, e.g., adjusted for 8 h energy storage cycles, and facilitate enormously the recyclability by simple replacement of solid materials in the accessible external reservoirs.

Is a Ni MH battery safe?

The Ni-MH battery is a safe and mature technology that possesses relatively high energy density ( $>300 \text{ Wh L}^{-1}$  at the material level) and long cycle life if depth of discharge (DoD) is controlled (20 000 cycles for a DoD of 50%).

How are  $\text{Ni(OH)}_2$  and MHS confined in an AORFB?

To achieve this,  $\text{Ni(OH)}_2$  and MHs are confined in the positive and negative reservoirs of an AORFB that employs alkaline solutions of potassium ferrocyanide and a mixture of 2,6-dihydroxyanthraquinone and 7,8-dihydroxyphenazine-2-sulfonic acid as catholyte and anolyte, respectively.
