

PD Deep Cycle Series

What is a deep cycle battery?

The nomenclature of deep cycle batteries comes from the fact that they are designed to be discharged as fully as possible each time they are used, a "deep-cycle" of the battery. Whereas discharging a starting battery fully can decrease the battery's lifetime, discharging a deep-cycle battery fully is exactly the battery's intended purpose.

What is the difference between a starting and a deep cycle battery?

Starting batteries are used for turning on appliances, such as lighting or a car's ignition. These batteries provide a lot of power over a very short period to get an appliance (or car) up and running. Deep cycle batteries, on the other hand, produce a smaller amount of energy but can do so for a very long period of time.

Are deep-cycle batteries still a thing?

Unlike the '90s Star Trek television series Deep Space Nine, deep-cycle batteries have been around for a long time and shall continue to be for years and years to come. Possibly until we've reached the era in which Deep Space Nine takes (took? will take?) place, the 24th century.

What is the difference between deep-cycle and cranking lead-acid batteries?

The structural difference between deep-cycle and cranking lead-acid batteries is in the lead battery plates. Deep-cycle battery plates have thicker active plates, with higher-density active paste material and thicker separators. Alloys used for the plates in a deep-cycle battery may contain more antimony than that of starting batteries. [4]

Why should you choose Renogy deep cycle hybrid battery?

This battery is comprised of gel instead of liquid, so there is no maintenance required to keep the battery working properly. Manufactured with advanced valve-regulated technology, Renogy Deep Cycle Hybrid GEL Batteries save you from acid leakage and frequent maintenance.

What are flooded deep cycle batteries?

Further, flooded deep-cycle batteries can be divided into subcategories of tubular-plated ops or flat-plated. The difference generally affects the cycle life and performance of the cell. The term flooded is used because this type of battery contains a quantity of electrolyte fluid so that the plates are completely submerged.

C& D Technologies" Deep Cycle Series (DCS) batteries are designed to perform regardless of how harsh the operating conditions may be. DCS batteries are designed and manufactured for maximum life in applications which are a ...

3.2%· This 12V 200Ah Deep Cycle Hybrid GEL Battery is perfect for critical systems due to its ability to withstand more than 750 charge/discharge cycles at 50% DOD. Stay protected against sudden loss of

mains power and ...

OverviewTypes of lead-acid deep-cycle batteryNew technologiesApplicationsRecyclingSee alsoExternal linksA deep-cycle battery is a battery designed to be regularly deeply discharged using most of its capacity. The term is traditionally mainly used for lead-acid batteries in the same form factor as automotive batteries; and contrasted with starter or cranking automotive batteries designed to deliver only a small part of their capacity in a short, high-current burst for starting an engine.

This 12V 200Ah Deep Cycle Hybrid GEL Battery is perfect for critical systems due to its ability to withstand more than 750 charge/discharge cycles at 50% DOD. Stay protected against sudden loss of mains power and ensure your vehicle or ...
