

What is a normal PSA?

PSA is measured in nanograms per milliliter (ng/mL). Although most doctors would consider a PSA of less than 4 ng/mL normal, some doctors say anything over 2.5 is abnormal. This is what the studies say: About 15 percent of men with a PSA under 4 have prostate cancer. About 25 percent of men with a PSA between 4 and 10 have prostate cancer.

What is a PSA test?

The PSA test is a blood test that measures a protein that is produced by normal healthy prostate cells and cancerous prostate cells. PSA levels in the blood are often high among men with prostate cancer, but there's no clear-cut abnormal or normal PSA level because it can vary from person to person. PSA screening isn't appropriate for everyone.

What does ng mL mean on a PSA test?

Results are reported (ng/mL), which means nanograms of PSA per milliliter of blood. High levels of PSA have been found in men with advanced prostate cancer. The PSA test has been around since the mid-1980s, when it was first used as a monitoring tool for prostate cancer.

What does a low PSA level mean?

Typical PSA levels vary by age. A PSA level that's higher than typical may indicate prostate cancer, but not always. Likewise, a low PSA level doesn't necessarily mean you don't have prostate cancer. Your prostate-specific antigen (PSA) levels should usually be pretty low. PSA is a protein your prostate gland produces.

What should a high PSA level be?

Your prostate-specific antigen (PSA) levels should usually be pretty low. PSA is a protein your prostate gland produces. High levels of PSA circulating in your blood may indicate prostate cancer. Experts consider PSA levels below 4 nanograms per milliliter (ng/mL) to be typical for most people.

What is a good PSA level for prostate cancer?

Technically, there is no upper limit. PSA levels can go into the tens or even hundreds of thousands. But generally speaking, these are the ranges of elevation: Your doctor will likely investigate anything over 10. Anything greater than 20 starts pointing more toward cancer. Anything above 50 is usually a very strong indicator of prostate cancer.
