In this investigation the annual energy use of the reference electric storage heater is equal to the total energy consumption of the electric storage water heater from Scenario 1 ($E_{ref} = 2.61$ MWh/year - see Table 3). The energy savings defined in this manner show the reduction in grid consumption compared to the total energy consumption (PV ...

However, its worth depends on how your solar PV system is already set up. If you already have battery storage as part of your solar panel system - like 73% of UK installations, according to Flexi-Orb - investing in a diverter is unlikely to be a cost-effective choice.
