

Pitched Roof Racking System Further Power

What is the best roof mounting system?

SunModo introduces the SMR Pitched Roof System, the best value pitched roof mounting system on the market. The SMR System represents a huge leap in racking technology. Optimized design makes the SMR Rails not only the lightest but also the strongest rails on the market. SunModo offers the next generation Ground Mount System.

What is SMR racking?

The SMR System represents a huge leap in racking technology. Optimized design makes the SMR Rails not only the lightest but also the strongest rails on the market. SunModo offers the next generation Ground Mount System. The streamlined design combines the simplicity of a pipe-based system with next-level engineering.

What is Aire Racking system?

The Aire Racking System has been carefully crafted to streamline every part of the installation process, taking out all of the tiresome hassles--so that you get off the roof and on to your next project faster than ever. All components have been evaluated for superior structural performance.

Are solar racks UL certified?

Entire system meets UL standards for solar racks, with or without MLPE devices. Open rail channel conforms to NEMA VE 1, certified for holding PV cables. Certified to maintain the fire resistance rating of the existing roof. Pre-stamped engineering letters are available in most states. Products guaranteed to be free of impairing defects.

What are Schletter roof hooks?

Designed to be highly durable, quick and easy to install, and capable of supporting heavy loads, Schletter roof hooks support solar on all common tile types, and feature optimized geometries to prevent and circumnavigate broken tiles. They're also height-adjustable, and available in high-quality aluminum or stainless steel.

Can a trapezoidal roof be installed parallel to a strut?

For trapezoidal roofs with a slope of less than 10°, installing modules parallel to the roof may not be ideal for self-cleaning or for maximizing yields. On the other hand, higher loads often make conventional strut-based support unfeasible or expensive.

These requirements also do not cover: performance during exposure to fire, structural attachments for the rack mounting system, structural performance of roof attachments for above roof mounting of photovoltaic (PV) modules and ...
