What is the growth rate of industrial energy storage?

Global industrial energy storage is projected to grow 2.6 times, from just over 60 GWh to 167 GWh in 2030. The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8.

How will the energy storage industry grow?

The size of the energy storage industry in the U.S. will be driven by rising electrical applications and the adoption of rigorous energy efficiency standards. The industry's growth will be aided by a growing focus on lowering electricity costs, as well as the widespread use of renewable technology.

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).

How can energy storage be profitable?

Where a profitable application of energy storage requires saving of costs or deferral of investments, direct mechanisms, such as subsidies and rebates, will be effective. For applications dependent on price arbitrage, the existence and access to variable market prices are essential.

“The energy storage business is set to outpace the vehicle business in terms of growth,” Musk stated. Tesla ventured into the energy storage sector in 2015, introducing the Powerwall for household energy storage. In 2019, the company launched the Megapack, targeting large-scale energy storage and the commercial and industrial markets. Since ...
