

What is the RCT Power Inverter?

The RCT Power Inverter is a device that enables you to connect two solar generator strings with a power output of 4kW and 6kW. It features 'Fits all' technology, which allows for the use of all types of solar panels and string layouts. The inverter is not affected by roof orientation or (partial) shading, ensuring efficiency is not lost.

Is the RCT power inverter noisy?

The RCT Power Inverter is extremely quiet. Our engineers have designed it with a fan-less cooling system to ensure minimal background noise. We consider comfort as a must-have, and a superior storage system should never disturb with noise.
