Why do we need a special connection technology for storage systems?

They therefore make a significant contribution to alleviating the load on power grids and support the integration of renewable energy into the power grid. Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently.

Are flexible battery storage systems the key to a reliable electricity supply?

Roger Miesen, CEO RWE Generation: "As the proportion of renewables in the electricity mix increases, so does the need for flexible battery storage systems. They balance out fluctuations in the electricity grid in seconds, which means they are the key to a reliable electricity supply."

We repurpose second-life batteries from former EVs and turn them into scalable, powerful energy storage systems. From commercial products to our own development sites, we capitalise on the growing availability of second life batteries, providing a future income stream for batteries whilst supporting the local and national grid.
