

Do rolls VRLA AGM batteries need balancing?

If Rolls VRLA AGM batteries are properly charged they should not experience varied capacity loss or require balancing. If they were not properly charged and there is a decrease in capacity, fully recharge the batteries at the recommended voltage. It is important to prevent heavy discharge.

Does rolls battery warranty cover damaged batteries?

All valid claims must be approved by Rolls Battery Technical Support before replacement product may be issued. The warranty does not cover shipping damage, cracked covers, cracked cases, bulged cases from heat, freezing or explosion, discharged batteries or the use of undersized batteries damaged from electrical equipment.

Where can I get a copy of my Rolls battery test?

Request a copy from your Rolls Battery Distributor or Dealer. Routine testing of specific gravity in Flooded models provides an opportunity to quickly identify any notable changes in battery performance caused by charge-related issues such as over/undercharging, sulfation buildup, capacity loss or cell/battery performance or failures.
