

Sunpal 460 8V 100Ah High Voltage LiFePO4 Battery

How long does a sunpal battery last?

With 10 Years Warranty, CATL Battery Cells, 6000 cycles @ 80% DoD. Sunpal 48V Lithium Battery Range 50Ah 100Ah 150Ah 200Ah. As a professional lithium battery manufacturer, Sunpal focus on lithium battery energy storage applications for more than 10 years.

Should LiFePO4 be kept at high voltage?

LiFePO4 wants and needs to settle. Keeping it at high voltage can lead to overcharging and other issues. Except it's not a good idea to keep your battery at 3.6V per cell. LiFePO4 wants and needs to settle. Keeping it at high voltage can lead to overcharging and other issues. Click to expand...

Do you float a LiFePO4 battery?

No need to float a LifePo4 battery higher than that. I use 54.5 volt also for my float, only because my Schneider XW Pro 6848 will pull it down .5 volts below my float setting while selling to grid, so my batteries see a 53.8 to 54 volt while in float and I'm selling to grid. 54 volts would be a good target for float. 4.
