

Temporary power storage work

How does a temporary power service work on a construction site?

Once the power switches over, an electrical team will disconnect and remove the temporary power components from the site. While a temporary power service is the best option for large-scale and long-term construction projects, it's not the only option for temporarily powering your construction site.

What is temporary power?

Temporary power is one power solution you could use during a period of construction. It often includes setting up equipment such as power poles, wiring, transformers, distribution equipment, switchgear, and meter panels to get enough energy for the trailers and equipment on your job site. When to use temporary power?

Do I need temporary power for my construction site?

Yet, you still haven't secured temporary power for your construction site. Most likely, you'll need temporary power poles to get enough energy for the trailers and equipment on your job site. The first step is to consult the experts. Look for temporary power companies to work with that can help you determine the power solutions you need.

Why does my construction site need a temporary power delivery?

At some point, every jobsite requires some temporary power delivery. One reason may be because permanent utility power has not yet been installed on your construction site. You could also need power delivered to a hard-to-reach location, or power at the site isn't sufficient for extra tools, lighting, or trailers.

What is a temporary power box?

A temporary power box, also known as a power spider box, is a portable electrical enclosure that provides temporary electrical power distribution on construction sites and other remote locations. It serves as a hub for connecting various electrical loads and distributing power safely and efficiently.

Do I need temporary power poles for my construction site?

Your construction crew and subcontractors are scheduled to begin work in a month or two. Yet, you still haven't secured temporary power for your construction site. Most likely, you'll need temporary power poles to get enough energy for the trailers and equipment on your job site. The first step is to consult the experts.
