

US AGM 24 U S Battery

What is an AGM deep cycle battery?

U.S. Battery's AGM Deep Cycle Batteries are engineered to deliver reliable deep cycling performance. The Absorbed Glass Mat (AGM) eliminates the possibility of spills and minimizes the need for maintenance.

What is a Group 24 AGM battery?

A Group 24 AGM battery is a lead-acid battery that uses an absorbed glass mat (AGM) separator instead of a traditional liquid electrolyte. This makes the battery spill-proof and safer to use in high-vibration applications. The AGM battery has a higher capacity and longer service life than traditional lead-acid batteries.

Where are AGM deep cycle batteries made?

Our AGM Deep Cycle batteries are developed in the U.S.A. and specifically manufactured for U.S. Battery under our guidelines assuring our customers they are being provided the highest quality AGM batteries available. positive active material designed to maintain structure during deep cycling.

What makes us battery a good battery?

In addition to designed-in vibration resistance and maintenance-free valve-regulated operation, U.S. Battery's new AGM design improves reliability and overall performance and delivers longer cycle life. The sealed Maintenance-Free line is engineered to deliver a deep cycle cost effective alternative to Lithium batteries.
