

To reduce dependence on fossil fuels, the AA-CAES system has been proposed [9, 10]. This system stores thermal energy generated during the compression process and utilizes it to heat air during expansion process [11]. To optimize the utilization of heat produced by compressors, Sammy et al. [12] proposed a high-temperature hybrid CAES ...

The special thing about compressed air storage is that the air heats up strongly when being compressed from atmospheric pressure to a storage pressure of approx. 1,015 psia (70 bar). Standard multistage air compressors use inter- and after-coolers to reduce discharge temperatures to 300/350°F (149/177°C) and cavern injection air temperature ...

Motivated by the suboptimal performances observed in existing compressed air energy storage (CAES) systems, this work focuses on the efficiency optimization of CAES through thermal energy storage (TES) integration. The research explores the dependence of CAES performance on power plant layout, charging time, discharging time, available power, and ...

The application of elastic energy storage in the form of compressed air storage for feeding gas turbines has long been proposed for power utilities; a compressed air storage system with an underground air storage cavern was patented by Stal Laval in 1949. Since that time, only two commercial plants have been commissioned; Huntorf CAES, Germany ...

Isobaric compressed air energy storage is a pivotal technology enabling the extensive deployment of renewable energy in coastal regions. Recently, there has been a surge in research integrating isobaric compressed air energy storage with various renewables. However, there remains a significant shortage of experimental ...

Compressed-air energy storage (CAES) is a commercialized electrical energy storage system that can supply around 50 to 300 MW power output via a single unit (Chen et al., 2013, Pande et al., 2003). It is one of the major energy storage technologies with the maximum economic viability on a utility-scale, which makes it accessible and adaptable ...

Among the available energy storage technologies, Compressed Air Energy Storage (CAES) has proved to be the most suitable technology for large-scale energy storage, in addition to PHES [10]. CAES is a relatively mature energy storage technology that stores electrical energy in the form of high-pressure air and then generates electricity through ...
